Just imagine the transformation your heart can make when given all the potent, powerful nutrients it needs to get you in the best health of your life.

Imagine never having to fear the threat of
Getting to the root cause of cardiovascular health problems can help prevent potential problems from turning into a full-blown health crisis.

High cholesterol... high blood pressure... and heart disease are symptoms of the real underlying cause to a compromised heart – inflammation.

The effects inflammation can have on your body can be disastrous. That’s why it’s important to put out the fire of inflammation before it burns out of control and ruins your health.

Generally, inflammation is your body’s natural response to an injury or infection. Classic symptoms include swelling... redness... warmth... pain... or loss of function in the affected area.

But the symptoms of inflammation within your body aren’t easy to identify making it a dangerous threat to your health. This is especially the case when inflammation develops as the result of disease or health problems.

A variety of diseases can cause inflammation. This includes the following:

- Giant cell arteritis
- Inflammatory bowel disease
- Lupus
- Lymphoma
- Osteomyelitis
- Rheumatoid arthritis
